

## RUBBER SLURRY HOSE

We manufacture rubber hoses to the highest standard as we strive to supply and achieve a long lasting high quality product, hoses are constructed with a liner, fabric reinforcing and steel wire. The liner comes into contact with the medium being transferred, fabric gives the hose its strength (pressure rating) and the wire allows the hose to bend without kinking.

We also offer rubber lining in thicknesses of 3mm to 16mm depending on the application and amount of wear. Our rubber lining is in accordance with SANS1201 and we are able to offer full QCP's including blast profile, adhesion, hardness & EID testing

Hoses produced include suction & delivery of water, pulp, slurry, chemicals and wet or dry abrasive materials. We offer a wide range of rubber hoses for all applications customised to your specific requirements.
